Introduction to Artificial Intelligence

Program 3 – Machine Learning

Dec 19, 2017

Objectives

Practice and get familiar with learning from observations. In this assignment you need to make use of the taught subject matters about Machine Learning (ch. 18 and 18.7).

Program

Write programs to build a prediction model using the training data:

- Use decision tree or neural network (or others)
- Implement the above learning algorithm
- Training data (TraData.csv):
 - #examples: 961,457 (154 MB)
 - #attributes (input): 12
 - #classes (output: click): 2
- Write a program to generate a hypothesis h and use it to predict test data. To "test" h, your program must
 - input test data from input.csv file
 - output prediction results to output.csv file in the following format (\hat{y}_i indicates the prediction results for *i*-th test example):

$$\hat{y}_1$$
 \hat{y}_2
 \hat{y}_3

:

- Accuracy =
$$\frac{tp+tn}{tp+tn+fp+fn}$$

- Precision =
$$\frac{tp}{tp+fp}$$

- Recall =
$$\frac{tp}{tp+fn}$$

$$-$$
 F-measure = $2 \cdot \frac{\text{precision} \cdot \text{recall}}{\text{precision} + \text{recall}}$

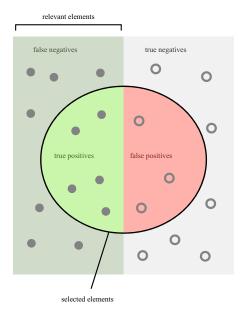

Figure 1: Precision and Recall

Report

- Explain your methods
- Evaluate each of your teammates
 - Score: 0 (no show), 1 (bad)–10 (good)
 - Give short comment (50+ words for each teammate)

Evaluation

• Report: 60%

• Performance: 100% (final test **F-measure**: 60%; rank: 40%)

• Cooperation (teammates' evaluation): 40%

Submission

- 2017/12/26: upload hypothesis for 1st testing
- 2017/12/29: upload hypothesis for 2nd testing
- 2018/01/02: upload hypothesis for final testing + **report** (pdf) + source code (zip)
